

# stellar $X^2$ VINTAGE

MODERN DESIGN WITH **VINTAGE TONE**

# K47 Style Capsule

## Hand Tuned to Perfection

Utilizes the Iconic '47 Style Capsule. This produces a very mid-range focused and vintage tone.

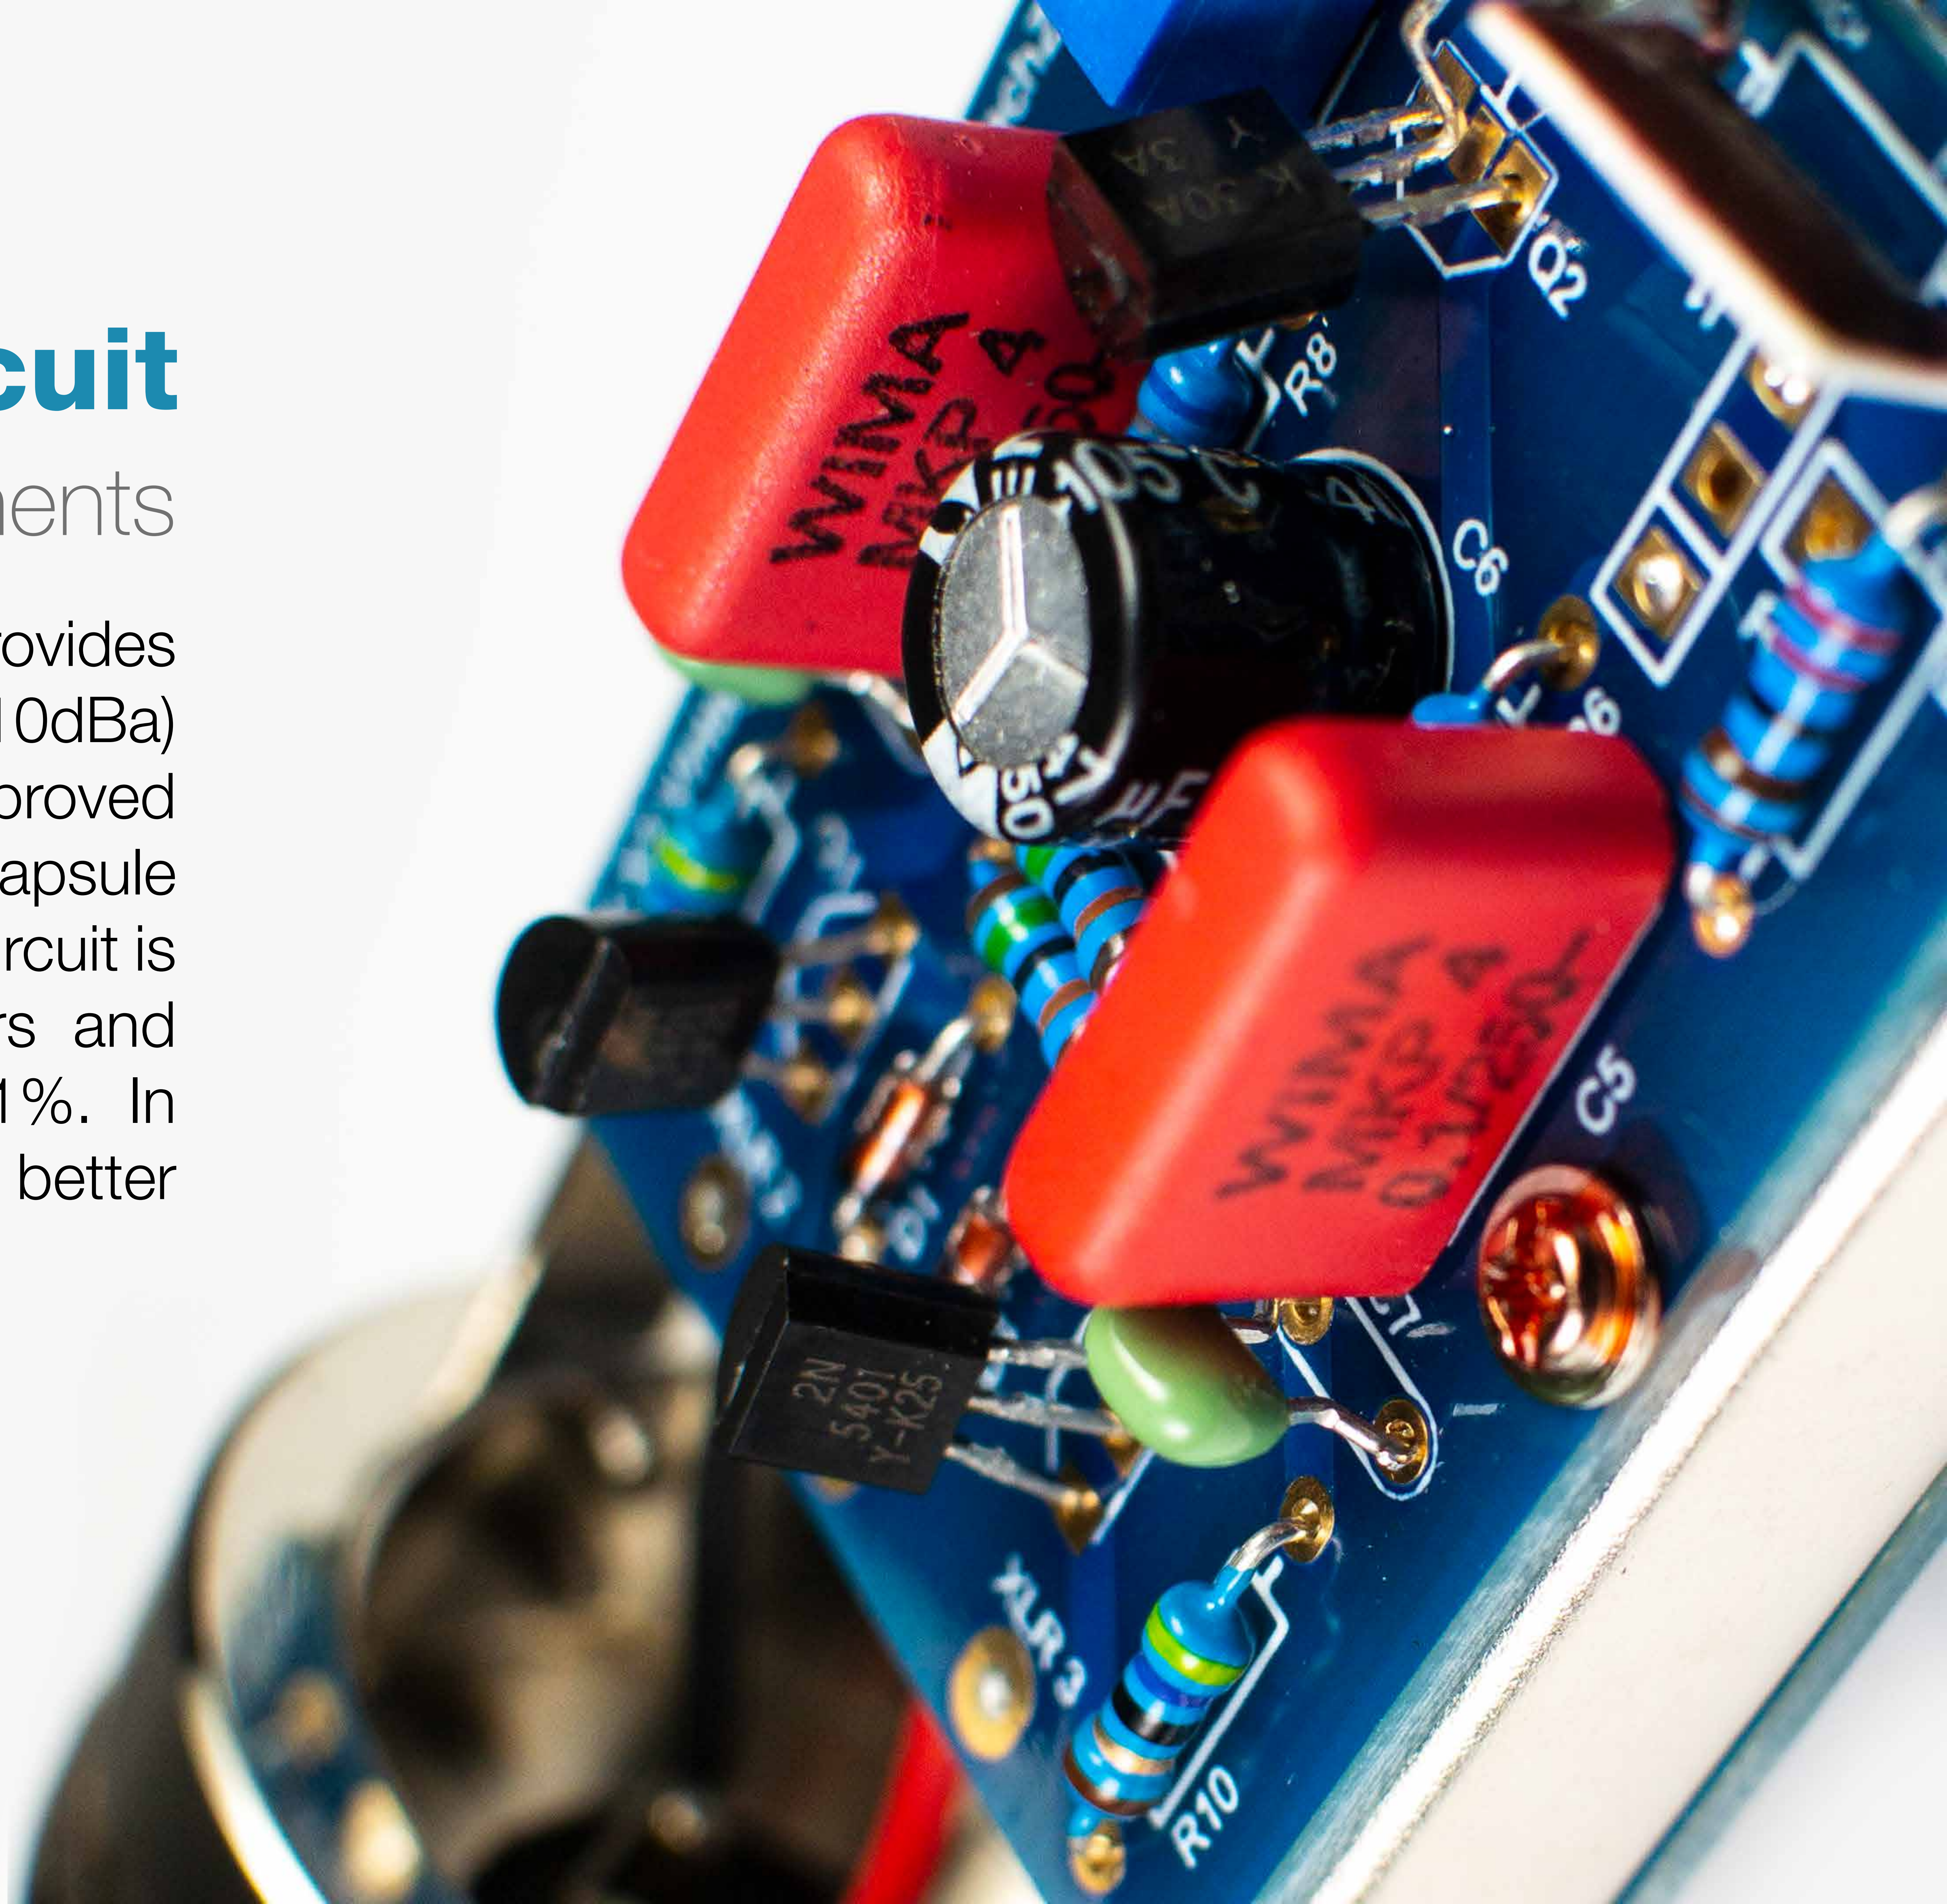

Our capsules are made with pure brass and use Japanese imported mylar. They are manufactured with high precision machinery to achieve good sensitivity making them able to reproduce sounds accurately.

# Highly Optimized Circuit

## Meticulously Selected Components

Our custom transformerless JFET circuit provides excellent performance with low noise ( $< 10\text{dBa}$ ) and low distortion. Added features and improved components work alongside the K47 style capsule to give our microphone a vintage tone. Our circuit is made using German WIMA film capacitors and components with tolerances as high as 1%. In addition, the PCB uses gold traces for better conductivity.

## High Quality Construction

### Black Chrome Beautiful Finish

Our Stellar X2 Vintage's body and frame are made from high-grade steel. This gives our microphones added durability. The main body is powdered coated then treated in an oven for added resistance to scratches. Electroplating is used for painting the head basket and end-cap for its scratch-resistant properties and stunning shiny finish.

# Professional Reviews

## What the Pros are Saying

“The X2 Vintage performed liked a mic **well above its price tag**. The recording was **full, precise, and the tone was nicely balanced**. It captured both the delicate finger picking, as well as harder full-on strums with full articulation, and the finished results **were natural sounding and true to the source.**”
